VO

VICTOR OHIRI

Creative Developer & Computer Science Student

200-level Computer Science student at Veritas University, Abuja. I design and build websites and web apps, from plain HTML, CSS and JavaScript to Next.js and Supabase, with a taste for type, motion and 3D on the web. I ship real projects, and I'm drawn to products that connect people to the right solution.

SKILLS

code
HTML, CSS, JavaScript, TypeScript

frameworks & tools
React, Next.js, Tailwind CSS, Vite, Supabase (Postgres), Git, Vercel

creative
WebGL, Three.js, GSAP, canvas, motion design

integrations
Claude API, Telegram bot, Paystack payment links

design
Web & UI design, responsive layouts, brand identity

LANGUAGES

English

INTERESTS

Coding, design, music and guitar, fashion

EXPERIENCE

2026 – now
freelance

Web designer & developer, Shylor

Personal practice and client services

- Custom sites, landing pages and redesigns, designed and built from scratch. Recent clients: Tara Designs and Perfectly Hooked.

SELECTED PROJECTS

2026
live

Corda – The Connection Layer

corda-nu.vercel.app

Own venture, website and app · HTML, CSS, JavaScript, Next.js, TypeScript, Supabase

- Founded, designed and built a platform that matches clients to vendors across creative and event categories, including photographers, designers and caterers.
- A marketing site that collects requests, plus an app with a dashboard for each role, its access rules in the database. Set up Paystack payment links; registered corda.ng.

2026
client

Tara Designs

tara-designs-creative.vercel.app

Architecture and graphic design studio · HTML, CSS, JavaScript, Canvas 2D

- Designed and built a four-page site with a filterable gallery of fifteen projects in five categories, a lightbox and a contact form.

2026
client, not yet launched

Perfectly Hooked

Handmade crochet brand · Next.js, TypeScript, Tailwind CSS, GSAP, Three.js, Supabase

- Built a shop of 23 pieces, a gallery and a custom-order page, with a 3D strand of yarn on wide screens. Checkout prices are worked out again on the server; payments are built and ready to switch on.

2026
with a partner

The Wall

Anonymous social posting app · HTML, CSS, JavaScript, Supabase

- Designed an account-free space where people post anonymously, react, comment and browse by category. Built the frontend in plain HTML, CSS and JavaScript on a Supabase Postgres backend.

personal

This portfolio

victor-ohiri.vercel.app

Next.js, React, TypeScript, WebGL

- Designed and built end to end: a WebGL glass name with a scroll animation, a dotted display typeface I generated, a 3D guitar scene and a small music player, checked with automated accessibility tests.

Also: Shylor Bot, a Telegram auto-reply bot on the Claude API (in progress) · Z3N, my earlier WebGL portfolio · Veritas Learn, a planned course-based study library for Veritas students.

EDUCATION

In progress
200 level

B.Sc. Computer Science

Veritas University, Abuja, Nigeria
